

Sir,

I am writing to voice my concern regarding poorly conceived legislation in the form of HR 4026.

The satellite radio service operators, and for that matter, the operator of any wireless service, should be free to offer content to its subscribers in a fair and equal way as afforded other delivery systems in our country. Satellite radio provides its subscribers content of great value made possible by the advance of technology - its utility should not be retarded in an arbitrary way. Were motor cars banned from carrying freight when they began to threaten then conventional wagon delivery systems? As a citizen and satellite radio subscriber I urge you to act responsibly in this regard and oppose the erection of any artificial barriers to content delivery for this growing new industry.
